EXPERIENCE

Human Interface Design Engineer

June 2025 – Present

CarePilot

Kansas City, MO

- Building features across web, mobile (React Native), and Chrome extension platforms using React, TypeScript, Vite, and Node.
- Designing and maintaining reusable UI components in CarePilot's cross-platform component library.
- Working with a cross-functional team to develop and integrate AI-driven clinical workflows (LLM-based scribing, diagnosis generation).
- Creating developer documentation and agentic tooling workflows for the Cursor IDE to streamline engineering productivity.
- Expanding our production CI/CD pipeline with automated testing for our mobile app suite (iOS, Android) using open source tooling.
- Using an internal LLM evaluation pipeline in Python that combined open-source heuristic checks (BLEU/ROUGE/Cosine Similarity) with LLM-as-judge scoring using rubric-driven prompts; produced side-by-side model/prompt comparisons.

Machine Learning Operations Engineer Intern

May 2024 – December 2024

ZeroEyes

Conshohocken, PA (Remote)

- Shipped 3-5 new features weekly in an Agile MLOps team, coordinating cross-functional delivery of features and bug fixes.
- Enhanced proprietary ML toolkit by integrating PyTorch learning rate schedulers, improving training efficiency for computer vision models, including Ultralytics-based systems.
- Implemented knowledge distillation functionality enabling model performance optimization across deep learning pipelines.
- Maintained critical internal ML toolkit used company-wide, improving workflows for ML engineers and enhancing the overall training process.

PROJECTS

Wrsl | *Svelte, TypeScript, Ruby on Rails*

November 2025 - Present

- Wrsl is a web service for creating and hosting wrestling tournaments, with a built-in state machine powering an integrated score board for scoring live matches.

Chatr | *Next.js, TypeScript, Python*

September 2025 - Present

- Chatr is a custom built chat-UI that allows users to privately communicate with any of their favorite model providers (OpenAI, Anthropic, XAI, etc) in a single application.

AetherScan | *Node, React, Python, TensorFlow*

February 2025 - May 2025

- AetherScan is a hardware-agnostic solution for human search and rescue.
- Built a YOLOv5 inference pipeline with GPU powered by AWS EC2 T4, sustaining 1080p @ 30 FPS.
- Used Docker compose to setup a network with the AI server and a real-time messaging protocol server to stream detections to the web app.

EDUCATION

The University of Kansas

August 2021 – May 2025

Bachelor of Science in Computer Science, Minor in Business

Lawrence, KS

- 2024 KU Undergraduate Research Fellow — Computer Vision & Machine Learning
- KU Artificial Intelligence Club President
- KU Professional Development Club Founder & President
- Cumulative GPA: 3.5

SKILLS

Frontend: React, JavaScript, TypeScript, Svelte, Ruby on Rails, Next.js, Tailwind, CSS/SCSS, Vite
Backend / ML: Python, FastAPI, Node/Express, PyTorch, TensorFlow, scikit-learn, Pandas, OpenCV
Cloud / DevOps: Docker, AWS (EC2, security groups), Azure (AI Foundry), GCP, Git, GitHub, CI/CD
Collaboration: Agile methodology, code reviews, clear written/verbal communication
